DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 and 5-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Doughty et al. [5,866,984] in view of Thorington et al. [3,670,193].

Doughty et al. disclose a rare-gas low –pressure discharge lamp [10], with a discharge vessel [14] which is filled with xenon gas, the discharge vessel being at least partly transparent to UV light characterized in that the discharge vessel is at least partly made of a glass/envelope having a transmissivity of UV radiation, the discharge vessel being at least partly coated with a phosphor [column 3, lines 45-50].

Doughty et al. disclose the claimed invention except for the suitable phosphor capable of radiating the UV to the specific wavelength of light to be produced.

Thorington et al. disclose a variety of phosphor compositions used in a lamp [column 3].

It would have been obvious to one of ordinary skill in the art at the time of the invention was made to use the appropriate phosphor composition based on the desired light intensity/desired color to be emitted.

Claims 10-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Doughty et al. and Thorington et al. as applied to claim 1 above, and further in view of Trasksel et al. [6,048,241].

Doughty et al. and Thorington et al. disclose the claimed invention except for the specific shape of the discharge vessel.

Trasksel et al. disclose a non-tubular type discharge vessel [210].

It would have been obvious to one of ordinary skill in the art at the time of the invention was made to use a non-tubular vessel for the discharge vessel for the purpose of controlling the placement/direction of the light emitted.

The specific shape would have been an obvious design consideration based on the specific application intended.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thanh S Phan whose telephone number is 703-305-0069. The examiner can normally be reached on M-F 9:00-5:00.
